

I Can Statement - Year 5 Maths

Topic Overview - Addition and Subtraction	Pre-taught Vocabulary	
This topic teaches you how to become an expert at adding and subtracting huge whole numbers with five or more digits. You will start by practicing smart strategies to add and subtract in your head before moving on to formal methods on paper. To make sure your answers are correct, you will learn how to estimate using rounding and use opposite "inverse" operations to double-check your work. Next, you will tackle tricky multi-step problems that require you to do more than one calculation to find the final answer. Finally, you will learn to compare different calculations to see which is bigger and hunt down missing numbers.	Mental strategies	Digits
	Whole numbers / integers	Inverse operations
	Multi-step: Problems	Rounding
	Compare	Calculations

RAG Rating:		Start	End	Teacher
1.	I can use mental strategies to add and subtract.			
2.	I can add whole numbers with more than 4 digits			
3.	I can subtract whole numbers with more than 4 digits.			
4.	I can use rounding to check answers.			
5.	I can use inverse operations (addition and subtraction)			
6.	I can solve multi-step addition and subtraction problems			
7.	I can compare calculations			
8.	I can solve problems involving missing digit calculations.
